Dear USDA:

SWIM requests that the United States Government and the United States Forest Service lead the way in protecting our nation's water quality. The government should uphold even better standards than required of states and private citizens.

Citizen participation is essential for the public to join in the process in a wise and balanced way. SWIM has found that citizens, local government, scientists, and agency people can work together to share our knowledge and develop creative solutions that help improve our environment. SWIM seconds the need for your plan to attain water quality standards, identify priority watersheds, and use state-of-the-art management practices, but we have a special concern that **citizen participation should be strengthened.**

These comments refer to the February 22 draft version of the Unified Federal Policy for Ensuring a Watershed Approach to Federal Land and Resource Management. Safer Waters in Massachusetts (SWIM) represents 400 families dedicated to protecting local waters from pollution, restoring the fisheries, and doing our share to protect the living resources of our nation and the world. SWIM was founded in 1984 - the year that according to the Clean Water Act the waters of America were to be "fishable and swimmable." We urge you to do your part to fulfill that promise as soon as possible.

Sincerely yours,

Polly Bradley

Polly Bradley, President
